

FILTRATION GROUP

HVAC POLYESTER ROLLS & PADS

- Bulk media rolls
- Cut media pads
- Mill direct truckload pricing
- Variety of media grades
- Standard and custom sizes
- UL900 Class 2

DESCRIPTION

Filtration Group's media manufacturing mill has been producing spray-bonded high-loft polyester media for air filtration for more than 20 years. Although we maintain smaller inventories of bulk and cut pads, Filtration Group will also ship truckload orders to the destination of your choice.

Filtration Group's mill is designed for flexible manufacturing. The efficiency of our operation enables us to produce custom styles and sizes with reasonable order minimums—typically 700 pounds per style.

BENEFITS

The PST Series is a traditional multi-denier media designed for general applications. The non-migrating, light dry tackifier is on the blue downstream

side to enhance dust retention. This media is an economical prefilter to extend the life of your final filters, or an adequate filter for less demanding, lower air flow applications.

The OR Series is a premium multi-denier, gradient density media designed for more demanding applications. The non-migrating, heavy dry tackifier is on the orange downstream side to enhance dust retention. This media is an economical alternative to pleats and panels in systems with low air flow.

APPLICATIONS

Typical uses for both the PST and OR Series include all common HVAC applications such as commercial buildings, public schools, universities and manufacturing operations.
