

HILCO Replacement Cartridges for Dual Fuel LM 2500 Packages

Many dual fuel LM 2500 gas turbine packages have been specified to use an Indufil® particulate filter TMR-S-1800-A-CC10-XHF-V. In applications where moisture contamination is a concern, an Indufil® coalescer, part number TMR-S-1100-UPG-10-XHF-V, can also be furnished. HILCO has recently developed lower cost, high quality replacement elements for this type of application.

HILCO particulate filter 3870-01-054-C offers a particulate removal efficiency of 99.5% at 17 μm . The cartridge produces a clean differential pressure of less than 1 PSID @ 50 GPM of #2 fuel flow. Each element boasts a substantial dirt capacity of 325 gms, as established by ISO 4572 test procedures .

In addition to removing the moisture contamination from the fuel, HILCO coalescer HC624-01-CG1 also acts as a polishing filter with a filtration efficiency of 99.5% @ 6 μm .

Both elements are direct replacements for the OEM supplied cartridges.
