

RESIN TRAPS

Federal Screen offers a complete range of resin trap styles to suit virtually any application. All are available in a full range of construction materials with a variety of connecting flanges and housings.

Federal Screen resin traps provide a high percentage of open area thus minimizing pressure loss through the system. Your resin trap can be designed to suit either new or existing strainer bodies.

STRAINER BASKETS

Federal Screen wedge wire strainer baskets are commonly used in applications where :

- perforated baskets do not provide sufficient open area
- mesh weave baskets are not suitable for the required pressure differential
- the cost of a combination perforated with mesh lined basket is not economical

Federal Screen baskets can be designed for new or existing strainer bodies and can be engineered for various flow directions.
